Voice & Data Systems Declares On-Premise Technology Obsolete

Leading Technology Provider Advises SMBs to Trade-In Their Obsolete Tech for the Latest Advancements

Omaha, NE And Council Bluffs, IA – November 30, 2017 - Voice & Data Systems a leading technology provider, announced today that the company has begun to advise owners of SMBs (small to mid-sized businesses) to trade-in their obsolete tech for the latest advancements in technology. With many companies already shifting the bulk of their infrastructure to a cloud-based IT environment, Voice & Data Systems is preparing their customers for the inevitable future that any on-premise technology is no longer necessary. In stride with companies like Uber, the world's largest taxi company that owns no taxis, or AirBnB, the world's largest hotel company, that owns no hotels, Voice & Data Systems asserts that the most businesses will own no on-premise technology, either.

Historically, business owners would purchase their technology outright, only to eventually be burdened with unforeseen maintenance costs,

repair costs or miscellaneous costs that were not part of the initial purchase, but necessary for scaling. The total cost of ownership of the technology far exceeded the initial purchase price and business owners were left deciding which servers, routers and supplementary purchases they needed to make without the expertise, nor inclination to do so. Furthermore, after a substantial capital expenditure, the underlying technology would reside on-site, eventually becoming obsolete.

In recent years, IT and telephony have evolved to the point where SMBs can completely avoid large capital expenditures on depreciating assets. This is one of the catalyzing reasons behind the explosive interest in cloud-based technology solutions, because once technology is in the cloud and is stored in extremely secure, off-site locations, the business owner doesn't have to waste time evaluating technology investments.

"We're helping more and more businesses transition to cloud-based technology, while enhancing their overall customer experience," stated Steve

Sawtell, President of Voice & Data Systems. "Not only does cloud lessen the financial impact of technological obsolescence or unforeseen maintenance/growth costs, but it's a superior ownership experience for everyone in the company."

Employees are continuing to ask employers for more and more remote working agreements, which requires cloud-based, off-site technology, that is constantly managed, monitored, secured and upgraded by a managed IT services provider in order to keep the company secure, while simultaneously offering employees the flexibility to work from anywhere. CFOs are largely in favor of cloud-Cloud Workspace solutions because of the fixed monthly costs. The CFO is never surprised by large capital expenditures or all technology going obsolete simultaneously.

True managed IT service providers, like Voice & Data Systems, are constantly upgrading technology solutions as features or functionality is added, so that each company always has the latest and greatest tech, without any spikes in monthly expense. Not to

mention, in a cloud services environment, additional technology can be added or reduced to adjust for seasonal sales cycles or as a company's office size needs shift, the technology can mirror that expansion or contraction. In other words, it provides more tech when you need it, less expense when you don't.

"Much like Apple's iPhone users who regularly receive software updates, speed improvements and other optimizations, simply by pressing a button without incurring an additional expense, SMBs can enjoy upgrades, new software improvements, add-ons and enhanced security simply by

working within our Cloud Workspace," added Mr. Sawtell. "The overall goals of technology are to increase competitive advantage and to reduce overall cost and the migration from on-premise to cloud services, is the most sensible step in that direction."

About Voice & Data Systems

Voice & Data Systems provides state-of-the-art unified communications technology to businesses in the Omaha-Council Bluffs metro and surrounding communities. The company creates customized, turnkey solutions specific to their customer's business for

telephone systems, data networks, video surveillance and converged networking applications. Voice & Data Systems friendly, manufacturer-certified technicians are available 24/7 to serve business needs for communication systems as well as voice, data, fiber optic and video cabling, testing and troubleshooting. Their mission is to provide technology solutions that increase their customers' profitability, improve employee productivity, and give them a competitive advantage in their marketplace.
