Voice & Data Systems Receives Cybersecurity Certification

*Leading Unified Communications
Provider Protects Local Businesses
From Cyber Attacks*

Omaha, NE And Council Bluffs, IA – September 28, 2017 - Voice & Data Systems a leading provider of unified communications has announced that the company is certified to provide cybersecurity solutions to SMBs (small to mid-sized businesses) to protect them from the barrage of cyber-attacks that occur every day. Cybercrimes are a serious threat and most businesses cannot afford to become the victim of malware, ransomware, phishing, password attacks, denial-of-service (DOS) attacks or malvertising of any sort for a prolonged period of time. Recent advancements in preventative technology have helped SMBs safeguard themselves from unnecessary attacks, network vulnerabilities and company downtime that can often result from such disruptions. Voice & Data Systems invests heavily in its staff of IT professionals, in order to insure that everyone is highly trained, highly certified and fully equipped to protect customers from cyber-attacks. “It’s incredibly important to continually invest in our people,”

stated Steve Sawtell, President of Voice & Data Systems. “When we invest in our technicians’ technical abilities, we are investing in our customers’ safety. This is why we’re constantly watching the technological horizon and educating our team so that when our customers need help, they are working with a world-class expert, not just some person who dabbles in IT.”

Most business owners are usually more focused on conducting revenue generating activities, instead of assessing potential IT vulnerabilities. This is why many SMBs have opted to outsource their IT to an external managed IT services provider; simply because they don’t have the time, expertise nor inclination to become an expert in these facets of business. By partnering with a trusted IT advisor, whose sole mission is to remain one step ahead of hackers, SMBs can remain focused on their top priorities and continue to grow their organizations to new heights.

“The security landscape is constantly changing in order to stay up with the latest global attacks. Since education, research, and development has been a cornerstone of Voice & Data

Systems, the company is able to stay a step ahead and provide the right guidance to customers to properly secure their networks now and into the future,” add Mr. Sawtell.

About Voice & Data Systems

Voice & Data Systems provides state-of-the-art unified communications technology to businesses in the Omaha-Council Bluffs metro and surrounding communities. The company creates customized, turnkey solutions specific to their customer's business for telephone systems, data networks, video surveillance and converged networking applications. Voice & Data Systems friendly, manufacturer-certified technicians are available 24/7 to serve business needs for communication systems as well as voice, data, fiber optic and video cabling, testing and troubleshooting.
