

Voice & Data Systems Educates SMBs on Surveillance & Security Breakthrough

SMBs Turn Surveillance Cameras into Data Hubs to Enhance Customer Experience

OMAHA, NE AND COUNCIL BLUFFS, IA – March 2019 - Voice & Data Systems a leading managed technology services provider (MTSP), is helping small to mid-sized businesses (SMBs) to take advantage of dramatically increased capabilities in surveillance cameras. As security, both online and offline, has become a growing concern for many small business owners, Voice & Data Systems is educating business owners on how recent advances in facial recognition and surveillance camera capabilities can protect their organizations from threats, while simultaneously enhancing customer experience.

“These aren’t your dad’s old security cameras,” stated Travis Wells, Vice President & Partner of Voice & Data Systems. “Security cameras have now become intelligent. Some of the most common problems with security in the past were the result of low-light environments with blurry, low-resolution cameras. When a breach would occur, authorities would have to review recordings or employ staff to monitor them live. However, the recent changes in our industry have taken security to a whole new level. Many SMBs have started to take advantage of

extremely sharp, 4K resolution and when paired with facial recognition software, business owners can custom tailor their client experience. This is huge for all sorts of industries, especially organizations that are highly-trafficked or security is an extremely high priority,” Wells added.

For years, one of the simplest ways to sneak into an organization, was merely by tailgating a group of secure employees. One person would swipe their access card and then hold the door open for everyone and the threat would walk right in through the front door. By the time anyone realized there was a potential threat, the infiltrator could’ve already left with any sensitive data that they wanted. Now, with real-time, streaming access paired with facial recognition software, surveillance cameras can recognize people by their faces. When cross-checked with a database, certain visitors can be treated as VIPs, elevating their experience, while other suspicious visitors can be prevented from accessing any areas of the organization, at the first line of defense. Casinos, banks, stadiums, corporate buildings and high-end retailers are obvious industries that could benefit from this technology, however the applications are seemingly endless.

Essentially, every single company now has the ability to constantly monitor all access points, recognize and categorize visitors based on their history with the company, manage important information and detect threats before they occur, instead of needing to remedy attacks after the fact. “It’s a complete paradigm shift,” concluded Wells.

ABOUT VOICE & DATA SYSTEMS

Voice & Data Systems provides state-of-the-art technology to businesses in the Omaha-Council Bluffs metro and surrounding communities. The company creates customized, turnkey solutions specific to their customer's business for telephone systems, data networks, video surveillance and converged networking applications. Voice & Data Systems friendly, manufacturer-certified technicians are available 24/7 to serve business needs for communication systems as well as voice, data, fiber optic and video cabling, testing and troubleshooting. Their mission is to provide technology solutions that increase their customers' profitability, improve employee productivity, and give them a competitive advantage in their marketplace.
