Voice & Data Systems Helps Businesses Harness AI Without Exposing Sensitive Data

*Leading MTSP Explains New Secure
AI Platform for SMBs*

OMAHA, NE AND COUNCIL BLUFFS, IA – June 25, 2026– Voice & Data Systems, a leading managed technology services provider (MTSP), announced today, that the company has is providing small to mid-sized business and non-profits artificial intelligence tools without exposing their organizations to the common security risks posed by the most popular platforms. As organizations have adopted AI tools like ChatGPT, Claude, Grok, and Copilot, their employees are unknowingly creating a major security risk: exposing sensitive information to public AI technologies. Voice & Data Systems now provides an all-encompassing AI solution that combines all of the popular tools with the highest level of security.

In January 2026, BlackFog found that 86% of workers use AI at least weekly for work tasks and 49% of workers admit using AI tools at work without employer approval. Whether workers are using these tools to conduct searches, create documents or enter organization

information they are doing it in a risky manner because none of the tools are secure. Most organizations have invested in cybersecurity. They have implemented firewalls, endpoint protection, Multi-Factor Authentication (MFA), email security, backup systems, and network monitoring. However, most are now unknowingly bypassing all of those protections the moment workers begin interacting with an unsecured public AI tool.

In other words, organizations may spend years fortifying the front door of their IT network, only to have workers unintentionally “hand the keys” to sensitive information directly to public AI platforms, exposing the organization to liability, security issues and hackers.

“Organizations have worked incredibly hard to secure their networks and protect their data like financial, employee, and customer information,” said Steve Sawtell, President of Voice & Data Systems. “The challenge now is that workers are using AI tools independently, often without realizing the potential

consequences of where that data is going.”

“The majority of your staff are already utilizing AI in some form, whether employers officially approve it or not. That means that even if they’re using AI to summarize documents, write emails, analyze spreadsheets, generate reports, troubleshoot problems, and automate workflows, they need to be aware of the liabilities they can inadvertently expose the business to,” added Mr. Sawtell.

The reality is simple: employees are already getting AI assistance from somewhere.

Which means businesses need to become actively involved in how AI is being used inside their organizations. Sensitive customer information, financial records, legal documents, internal communications, proprietary processes, source code, pricing models, and confidential business strategies can all unintentionally become exposed when entered into unsecured public AI systems.

“Most businesses know they need to start leveraging AI to stay competitive,” Sawtell commented. “But they also need guardrails. Companies want the

productivity benefits of AI, but we step in and lock down these tools, so they are safe and secure.”

Voice & Data Systems secures AI tools helping organizations establish guardrails around how AI is used, allowing workers to benefit from automation and intelligence while maintaining oversight, compliance, and human review. “AI has quickly become the most powerful productivity tool ever created,” Sawtell said. “But the organizations that win long-term won’t necessarily be the ones using the most AI. They’ll be the ones using it securely, responsibly, and strategically.”

ABOUT VOICE & DATA SYSTEMS

Voice & Data Systems provides state-of-the-art technology solutions for businesses throughout the Midwest and Great Plains from their headquarters in Omaha, Nebraska. The company implements strategies and customizes solutions that are specific to their customer’s requirements for Managed IT Services, Business Phone Systems, Surveillance, Access Control, Wireless and Cabling Infrastructure.

Voice & Data Systems serves a diverse customer base that includes Private Business, Commercial, Educational, Health Care, Public Utilities, Hospitality, Industrial, Utilities, Religious Entities, Local, State and Federal Government

including the Military. Their mission is to provide specific technology solutions that increase their customers’ profitability, improve employee productivity, and give them a competitive advantage in their marketplace. For more information, please call (402) 5719049 or visit www.voicendata.net.
